ADR-0001: Sealed quotes and a single-transaction confirmation

Status	Date	Decision makers	Confidence
proposed	2026-10-14	Tech Lead	High. Medium on gift tax (depends on the country)

Confirmed orders went missing in three releases. We must guarantee confirmed total = quoted total, exact money, that a 201 is a stored order, and that its effects reach push and the ERP.

Decisions and discarded alternatives

Decision	Discarded	Why
Insert-only quote lines. The order references them, with no amounts	Copying the breakdown. Recomputing at confirmation	Two copies diverge. Recomputing changes with prices
BigDecimal per line. Combos, then tiers, then tax	long. Rounding the total. Tiers first	Hides cents. Double discount on the combo
One PostgreSQL transaction: key → quote → credit → order → outbox; 201 after commit. Outbox with a lease and event_id	Asynchronous write or saga. Publishing after commit. Memory	The "confirmed but missing" defect. Lost events. No real locks
Hexagonal monolith, separate repositories (API, docs, web, infra, tools)	Microservices. Monorepo	One transaction covers the write. Each component evolves apart

Not implemented, on purpose

- **Authentication:** out of scope. A gateway would inject the tenant and customer.
- **Revocation, cancellation and credit release:** not asked for. Revocation is the mitigation.
- **Real push and ERP clients:** fakes behind ports already prove the guarantees.
- **Catalog, tax categories, price history, OpenAPI and deployment:** not asked for.

Code review checklist

- No float or double. Money is compared with compareTo.
- @Transactional only on use cases, with no self-invocation and no remote calls.
- Locks key → quote → credit. The 201 after commit. No cached failure.
- Every lever with a golden test seen failing. User text only in i18n.

Risk and mitigation

Risk: a sealed quote honors a wrong price until it expires. **Mitigation:** a 15-minute TTL; then revocation (OPEN → REVOKED, 409). **Revisit** if an incident affects more than 100 quotes or the TTL exceeds one hour.
